

DBMS (CS301)

Complete Syllabus

Course Overview

Database Management Systems focus on the design, implementation, and management of databases for efficient storage, retrieval, and security of data.

Course Objectives

Develop an understanding of relational database concepts, query languages, normalization techniques, and transaction management.

Learning Outcomes

Students will be able to design database schemas, write SQL queries, optimize data storage, and ensure data integrity and security.

Prerequisites

Programming fundamentals and basic knowledge of data structures.
